

### Step 1

Start by drawing a long triangle shape. The triangle is rounded on its long sides (a) & (b). The short side (c) is straight.

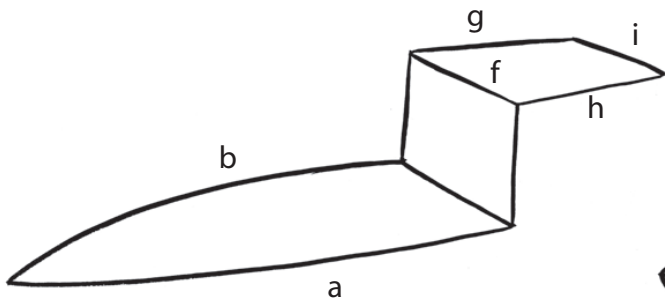

### Step 2

Now add legs (d) & (e) coming straight up from side (c) of the triangle. Connect the legs to make (f), parallel and equal in length to (c).

### Step 3

Now add two legs (g) & (h) extending from the corners of (f). (g) & (h) are parallel to (a) & (b). Connect the ends of (g) & (h) to create (i). You've now completed the "deck" area of your Pirate Ship.

### Step 4

Now make two curving lines (j) and (k) down from the corners of the deck. Make sure your lines extend well beyond the bottom of the deck. This will be the facing side of the ship.
